ADVANCED AG TILLAGE SOLUTIONS SINCE 1973

Applications:

The Wilcox Finishing Chisel picks up where spring loaded chisel plows leave off. While the finishing chisel shanks are shear protected the breakout is typically 2-3 times that of spring loaded shanks. Many western soils will trip or force spring shanks to pivot upward before the chisel has achieved the desired depth.

The rigid shank applies the maximum amount of fracturing force to the ground not limited by a particular spring rate. In other words a spring shank can only penetrate ground softer than the spring rate thus, skimming over the compacted areas. A continued practice of skimming only increases the degree of compaction as well as the ever-increasing area compacted.

The use of rigid shanks not only insures desired depth usually far beyond that afforded with spring shanks but, there are no moving parts and maintenance is not an issue. Though bolt, bushings, bushing pins, and springs are not used as the shanks are fixed in a similar manor as the larger sub soiler models.

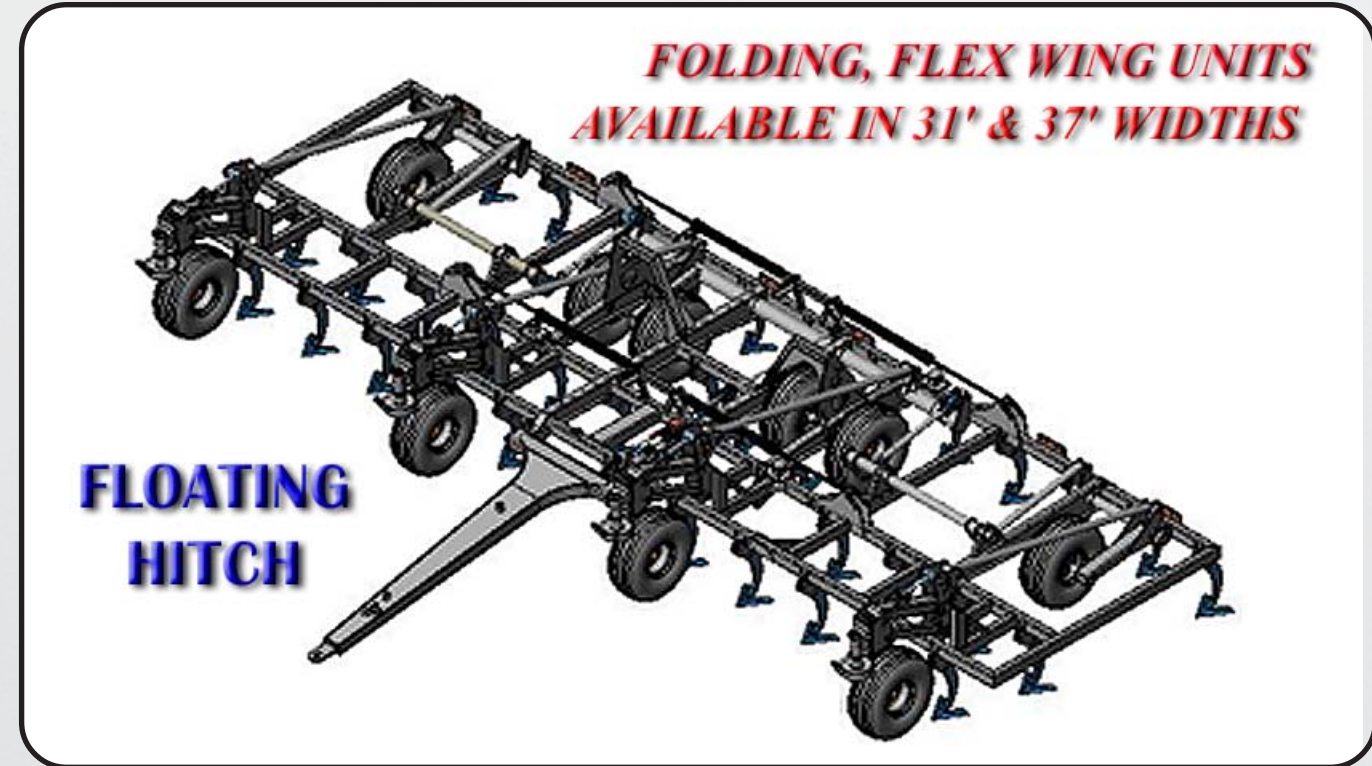

Choose from multiple models and configurations ranging from 3PT to Pull Type, Rigid to Folding, both in Flex Wing and Rigid wing mechanisms. Many units are also available with the Wilcox Reel assembly in either both mechanical or hydraulic down pressure kits.

Features:

- 2, 3, & 4 bar configurations
- 1-1/4 x 30" (3.18x76 cm) Alloy Shanks
- Reversible points
- Sweeps on most models
- Depth from 5 in. / 12cm. – 20 in. / 50 cm.
- Rigid shanks with shear protection
- Heavy wall tubing frames
- Mechanical or hydraulic reels
- Folding flex wings and Rigid wings
- 31 & 37 available in floating tongue
- One touch depth control

Options:

- Hard faced & Chrome points
- Sweeps
- 3 PT Units available w/ dual steel wheels or rubber tires with 6500 lb 8 hole hub & spindles
- Rear Hitch

The Finishing Chisel Reel was designed to aid several extra dynamics to the already superior chisel plowing effects of the Wilcox Finishing Chisel.

- ★ Residue is chopped, broken and incorporated
- ★ High speed low cost ground driven mulching
- ★ Leveling or planing compliments of the soil carrying qualities of reels
- ★ Both mechanical and Hydraulic Down Pressure Kits available
- ★ Better than field cultivator finish from a chisel plow

With the ability to fold reel up out of the working position allowing the coarse aerating chisel plow effect can be achieved with the same single implement which by now folding the reel into the working position provides a well-finished seedbed.
