SUPERIOR SUBSOILING RESULTS & SAVINGS

*Save Passes, Time & Money When You Attach a
WILCOX High Torque Crumbler To Your Chisel*

Pair up a WILCOX Chisel and High Torque Crumbler for superior subsoiling with an outstanding finish.

CRUMBLER BENEFITS

- **Shatters Surface Clods**
- **Cracks Sub-Surface Clods**
- **Leaves A More Level Field Finish**
- **Improves Soil Structure** for more efficient land planeing, discing, etc. following ripping.
- **Saves One To Three Passes of Additional Tillage Work** required to clean up unwanted ripping after-effects.
- **Fuel, Labor and Other Operating Costs Savings** help to pay for the Crumbler, and makes you more money at harvest.

The **WILCOX High-Torque Crumbler** attaches to the back of your chisel or ripper in a manner that enables the crumbler to gauge the chisel. It adds an additional 5,000 pounds of down force to the 8-10,000 pounds of your chisel's down force, which is typically wasted on the gauge wheels. This results in effectively applying 13-15,000 pounds of down force to breaking up surface clods and cracking sub-surface clods. This also reduces gauge wheel wear and extends gauge wheel tire life. The crumbler blades, at 5 inch spacing, also create a rolling action of the soil flowing through the blades that leaves a more level and firmer finish. A **WILCOX High Torque Crumbler** can eliminate discing and land planeing passes to clean up the clods and uneven surfaces resulting from traditional subsoiling without a crumbler.

A WILCOX High-Torque Crumbler multiplies the effectiveness and efficiency of your ripper or chisel. It eliminates or greatly reduces unwanted after-effects that require additional passes to clean up.

The costs to rip, plus the costs of the additional passes needed to clean up the clods and get the finish you want, can add up to the highest of all tillage costs. Now there's a better, more efficient and cost-effective way to subsoil.

Lets talk about adding a WILCOX High-Torque Crumbler to your subsoiling program.
