WILCOX 2000 Series

PULL TYPE, 3PT & ROCK SHAFT CHISELS

Applications:

To loosen compacted areas as cost effectively as possible. This being not only lower draft requirement but producing the best possible finishes available. This fracturing and aerating increases water retention, improves leaching of salts out of root zone.

The unique Wilcox design shank combined with the Wilcox staggered concept was developed specifically with the advantages of a level relatively clod-free finish. These features were developed to broaden the benefits to the grower beyond just the chiseling operation.
